TITLE: COMPUTER AUCTION SYSTEM

PUBN-DATE: October 12, 2001

INVENTOR-INFORMATION:
NAME   COUNTRY
TANUMA, NORIO   N/A

INT-CL (IPC):   G06F017/60

ABSTRACT:

   PROBLEM TO BE SOLVED: To solve a problem that **used products** are not
maintained except for limited products such as vehicles in a present
distribution market concerning **used products**.

   SOLUTION: In this computer auction system, auction participants (sellers and
buyers) buy and sell products, which are difficult to move and expensive
comparatively, such as a semiconductor preparing device, a machine tool, a
construction machine, an agricultural machine being **used products** by connecting
a terminal such as a personal computer too a computer site including an auction
server 10 organizing the auction online such as the Internet. Thus, the object
of this system is such a product as is purchased by forming a contract for
selling and buying between a seller and buyer by the holding of the auction
once, which is only a temporary contract, and then making a main contract after
the buyer actually confirm the product of the buyer and gets satisfied with it.
